PROFESSIONAL SUMMARY

Information Science and Engineering undergraduate with a strong foundation in Data Structures and Algorithms and hands-on experience building Deep Learning solutions in Python using TensorFlow and Keras, including a CNN-based model for ECG arrhythmia classification. Solved 100+ DSA problems across competitive programming platforms, demonstrating strong logical reasoning and problem-solving ability and seeking a Software Development / Java / Python / AI-ML internship to apply technical skills and a growth mindset toward building efficient, scalable solutions in a collaborative environment.

TECHNICAL SKILLS

Programming: Python, Java, C, SQL, AI, ML

Core CS: Data Structures & Algorithms

AI / ML: Machine Learning, Deep Learning, NLP, Data Preprocessing, Scikit-learn, TensorFlow, Keras

Tools & Cloud: Git, GitHub, AWS Cloud Fundamentals, Cloud Computing, CloudSim, LaTeX

Databases: SQL, MongoDB

Soft Skills: Communication, Leadership, Problem-Solving, Team Collaboration, Adaptability, Analytical Thinking

EDUCATION

Bachelor of Engineering — Information Science and Engineering Expected *Graduation: 2027*

Sai Vidya Institute of Technology, Rajankunte, Bengaluru

CGPA: 8.72 (till 6th Semester)

Pre-University (Class 11–12), PCMC

KTSV PU College for Women, Bengaluru

PROJECTS

CNN-Based Deep Learning Model for ECG Arrhythmia Classification

- Built a deep learning model using Convolutional Neural Networks (CNN) to automatically analyse ECG signals and classify different types of cardiac arrhythmias. Implemented the model pipeline in Python using TensorFlow and Keras, with OpenCV used for signal/image processing.

Cloud Load Balancing Simulation

- Developed a simulation system that lets users input the number of virtual machines (VMs) and tasks to model load distribution. Built the simulation using Java and CloudSim to visualise efficient load balancing across VMs.

CERTIFICATIONS

- Advanced Data Structures & Algorithms in Java: Sorting & Searching Algorithms
- Google Cloud Career Launchpad — Cloud Engineer Track
- MongoDB Python Developer Path

ACHIEVEMENTS

- Solved 100+ Data Structures & Algorithms (DSA) problems across competitive programming platforms.
- Participated in hackathons**, gaining experience in collaborative problem-solving and developing technology-based solutions.
- Participated in the Unisys-related project**, gaining exposure to practical software development and technology applications.
